

WATER SYSTEM

OLAER

RANGE *clear water*

WATER PRESSURE BOOSTER - REGULATION - ANTIWATER HAMMER

The **Hydrochoc** surge vessel is a hydropneumatic bladder accumulator which dampens water hammer in transients due to pump start/stop or valve open/closure.

Additionally, the vessel ensures that the pressure in a system is maintained following low consumption or leaks (limits the number of pump starts per hour).

RANGE *waste water*

ANTIWATER HAMMER

The **Hydrochoc waste water surge** vessel is a hydropneumatic surge vessel designed to rapidly give large flow to the system it protects against transients due to cut off of the pumping station when the effluent is heavily charged or fibrous.

RANGE *waste water*

ANTIWATER HAMMER

The **Hydrochoc sewage bladder** surge vessel with automatic air regulation operates not only as a surge vessel but also as a balancing chimney, without compressor or bladder.

Designed for heavily charged or fibrous liquids, it is perfectly adapted to protect flat pipelines often encountered in waste water systems.
